Bronchi Function in the Respiratory System What Does the Primary Bronchi Do. The main function of the primary bronchi is to carry oxygen-rich air reach the lungs during inhalation and let carbon dioxide-rich air out of the lungs and into the trachea on its way out during exhalation [17]. It is the connection between the rest of the respiratory ...

Insect Respiratory system is not the same as the respiratory system in humans. Animals like cows, birds, snakes, lions, elephants, including humans, have lungs as their primary respiratory organ. In these animals, lungs are dedicated to exchanging air with the aid of nostrils, nasal cavity, and the windpipe.

Nasal Cavity Definition. The nose is one of the primary sensory organs responsible for the sense of smell, while it also plays major roles in respiration and speech production [1].The nasal cavity lies just behind the two nostrils and forms the interiors of the nose.. It makes up the upper respiratory system along with the paranasal sinuses, oral cavity, pharynx, and larynx [2], and is the ...

### **Nasal Cavity - The Respiratory System**

The respiratory system extends from the nose and upper airway to the alveolar surface of the lungs, where gas exchange occurs. Inhaled tobacco smoke moves from the mouth through the upper airway, ultimately reaching the alveoli. As the smoke moves more deeply into the respiratory tract, more soluble gases are adsorbed and particles are deposited in the airways and alveoli.
