I started this post thinking I'd write a review of Andreas Wagner's recent book "Arrival of the Fittest: Solving Evolution's Greatest Puzzle" (links below), an engrossing book about how biological innovation arises from the structure of metabolic, genotype, and protein networks, and how robustness—the stability of phenotypes in the face of underlying genetic variability—is critical in evolutionary innovations.

University of Zurich evolutionary biologist Andreas Wagner is the first to give Darwin his due, but in his new book, Arrival of the Fittest: Solving Evolution's Greatest Puzzle, argues that natural selection alone cannot explain the totality of evolution. We got a chance to chat with him recently about the natural phenomena that give rise to life's stunning innovations.

In Arrival of the Fittest, renowned evolutionary biologist Andreas Wagner draws on over fifteen years of research to present the missing piece in Darwin's theory. Using experimental and computational technologies that were heretofore unimagined, he has found that adaptations are not just driven by chance, but by a set of laws that allow nature to discover new molecules and mechanisms in a fraction of the time that random variation would take.

Arrival of the Fittest is a brave venture into the process of evolution at the cellular level. Despite the 150 odd years since origin of species and the acceptance of evolution as a force of biological change and adaptation our understanding of the proces of evolution from the bottom up remains in its infancy.
