## **Activity 1 - DNA Extraction**

To understand how DNA extraction is done, you will extract DNA from strawberries today. Lab: 1. See lab handout "Strawberry DNA Extraction" Questions: 1. Have students complete the "Student Response" worksheet. 2. Answer any questions from the list made at the beginning of class. Closure: 1. Ask students what they learned about DNA and ...

## **Strawberries & DNA - Educational Resources**

Well, not entirely. Because DNA is in every cell, there is a lot of it in an organism. If you took all of the DNA out of some middle-sized organism (or part of an organism, like a piece of fruit), you could see and even touch DNA. We will use common household products to break apart the cells in a banana and extract out the DNA.

detergent is used to lyse the cell so that DNA is released into the solution. Then alcohol is added to cause the DNA to precipitate out. Strawberries are chosen for this particular experiment because strawberry cell has eight copies of the genome, and it would be easier to extract the DNA since it is

### **EXTRACTING DNA FROM STRAWBERRIES - Michigan**

DNA extraction is a fairly simple process. The first step is to create the lysis buffer. Lysis is a Greek word that means to break open. The lysis buffer (water, detergent and salt) breaks open the cells by destroying the fat-ty membranes that enclose the cells as well as the nuclear membranes within the cells.

DNA, or deoxyribonucleic acid, is found in the cells of all living things. It is the master code or blueprint for the organism. During cell division, this code is copied and passed to new cells. DNA also controls all cellular activities through its role in protein synthesis. In this lab, the class will extract DNA from a banana.

Students extract DNA by lysing their cheek cell sample, then watch as wispy white strands of their own DNA precipitate out of a solution conta...

## **DNA Necklace Kits | Carolina.com**

During the DNA extraction, the soap pulls apart the fats (lipids) and proteins that make up the membranes surrounding the cell and nucleus. Once these membranes are broken apart, the DNA is released from the cell. The salt enables the DNA strands to come together, or aggregate. The DNA precipitates out of the solution when the alcohol is added.
