It is very funny and a great gift for teens and adults. I wouldn't order it for a kid up to about 10 years old though. The front of the book is purple

Do Penguins Have Knees? An Imponderables Book: Feldman ...

Yes, penguins do have knees. The structural configuration of the knees of a penguin is based on the same structure of bones that give form to a human leg. A penguin's leg has a short femur, knee, tibia and fibula. The reason why their legs appear to be short and sturdy is that a large portion of their upper leg is obscured by dense feathers.

Do Penguins Have Knees? » Science ABC

Penguins do in fact have knees, femurs, and many other bone structures. They are all hidden under the thick layer of their body. The bones of penguins, unlike other birds, are very dense and thick because they need to be able to dive quickly and stiffen their wings so that they can be highly efficient in the water.

Do Penguins Have Knees And Feathers? | Science Trends

Penguin knees are tucked up inside their body. Penguins are designed to be streamlined and hydrodynamic, so having long legs would add extra drag. Having short legs with webbed feet to act like rudders, helps to give them that torpedo-like figure. If we compare bird anatomy with humans, we would see something a bit peculiar.

Do Penguins Have Knees?...and other frequently asked ...

Yes, penguins do have knees! They have the same leg bones as most other bipedal vertebrates, but certain adaptations have made walking a bit harder for them. A penguin's leg is composed of a short femur, knee, tibia and fibula. The upper leg bones are not visible as they are covered in

feathers giving penguins a very short legged appearance.
