If you're an Amazon Prime member, you can get a free Kindle eBook every month through the Amazon First Reads program.

### Personal Satellite Services Second International

In the context of spaceflight, a satellite is an object that has been intentionally placed into orbit. These objects are called artificial satellites to distinguish them from natural satellites such as Earth's Moon.. On 4 October 1957, the Soviet Union launched the world's first artificial satellite, Sputnik 1. Since then, about 8,900 satellites from more than 40 countries have been launched.

Galileo is intended to be an EU civilian GNSS that allows all users access to it. Initially GPS reserved the highest quality signal for military use, and the signal available for civilian use was intentionally degraded (Selective Availability). This changed with President Bill Clinton signing a policy directive in 1996 to turn off Selective Availability.

A personal video recorder (PVR) is an interactive TV recording device, in essence a sophisticated set-top box with recording capability (although it is not necessarily kept on top of the television set). Vendors and media also refer to the units by these names: digital video recorder (DVR); personal TV receiver (PTR); personal video station (PVS); and hard disk recorder (HDR).

When you enter a web address into your browser, it sends out a signal. With HughesNet Gen5 satellite Internet, that signal goes into space, to HughesNet satellites. It is then sent to a center called a NOC, which seeks out the web address and sends it back to you through the satellite. This all happens in less than a second.
