Practicals in plant breeding - AGRIS

Plant breeding is the science of changing the traits of plants in order to produce desired characteristics. It has been used to improve the quality of nutrition in products for humans and animals. The goals of plant breeding are to produce crop varieties that boast unique and superior traits for a variety of agricultural applications.

Plant breeding - Wikipedia

Plant breeding, application of genetic principles to produce plants that are more useful to humans. This is accomplished by selecting plants found to be economically or aesthetically desirable, first by controlling the mating of selected individuals, and then by selecting certain individuals among the progeny.

plant breeding | History, Applications, & Methods | Britannica

Overview: A Plant Breeder is responsible for the research of seed characteristics and strives to improve the seed characteristics that are of the best quality for the plant. They work towards finding the best possible trait that is desirable for yield, maturity, quality, size, and can be resistant to drought, frost, and pests in certain plants.
