Authentication and Input/Output validation¶. When using websocket as communication channel, it's important to use an authentication method allowing the user to receive an access Token that is not automatically sent by the browser and then must be explicitly sent by the client code during each exchange.. HMAC digests are the simplest method, and JSON Web Token is a good feature rich ...

HTML5 Security - OWASP Cheat Sheet Series

The team worked hard to continue delivering and adding value for our users. New version, new website, new ways of getting together In 2020 we launched OWASP SAMM v2.0, more than 10 years after OpenSAMM v1.0 was launched on March 25th, 2009 by Pravir Chandra. Throughout 2020 we developed and released a new website and promoted the launch of SAMM v2.

OWASP SAMM

For web apps you can use a tool like the OWASP ZAP or Arachni or Skipfish or w3af or one of the many commercial dynamic testing and vulnerability scanning tools or services to crawl your app and map the parts of the application that are accessible over the web. Some web application firewalls (WAFs) may also be able to export a model of the ...

Attack Surface Analysis - OWASP Cheat Sheet Series

ModSecurity is an open source, cross platform web application firewall (WAF) engine for Apache, IIS and Nginx that is developed by Trustwave's SpiderLabs. It has a robust event-based programming language which provides protection from a range of attacks against web applications and allows for HTTP traffic monitoring, logging and real-time analysis.

GitHub - SpiderLabs/ModSecurity: ModSecurity is an open ...

The OWASP ModSecurity Core Rule Set (CRS) is a set of firewall rules, which can be loaded into ModSecurity or compatible web application firewalls. The CRS consists of various .conf files, each containing generic signatures for a common attack category, such as SQL Injection (SQLi), Cross Site Scripting (XSS), et cetera.

FAQ - OWASP ModSecurity Core Rule Set
