In computer science, random-access machine (RAM) is an abstract machine in the general class of register machines.The RAM is very similar to the counter machine but with the added capability of 'indirect addressing' of its registers. Like the counter machine, The RAM has its instructions in the finite-state portion of the machine (the so-called Harvard architecture).

March Break Camps and Spring Break Camps for 2021 - Our Kids

Author Yannavar Bush published a paper noting the difficulty in looking up publications of new scientific discoveries. He noted the human mind doesn't work by indexing, but by associative memory. He suggested a machine that could stimulate to some degree the mind's ability to make associations between pieces of information.
