Information Theory And Reliable Communication

Information theory studies the quantification, storage, and communication of information.It was originally proposed by Claude Shannon in 1948 to find fundamental limits on signal processing and communication operations such as data compression, in a landmark paper titled "A Mathematical Theory of Communication".The field is at the intersection of probability theory, statistics, computer ...

Information theory - Wikipedia

Communication theory was proposed by S. F. Scudder in the year 1980. It states that all living beings existing on the planet communicate although the way of communication is different. Plants communicate their need to be taken care of and watered immediately through visible changes in the colour of the leaves, and the falling of leaves and flowers.
