### **Multi Agent Systems**

The agents in a multi-agent system have several important characteristics: Autonomy: agents at least partially independent, self-aware, autonomous Local views: no agent has a full global view, or the system is too complex for an agent to exploit such knowledge Decentralization: no agent is ...

Multi-agent systems (MASs) ([5, 6, 19]) are a new and promising area in the field of distributed artificial intelligence (DAI), as well as in the mainstream computer science. These systems are compound of relatively autonomous and intelligent parts, called agents. Even if we restrict ourselves to computer science, a word 'agent' has many meanings.

A multi-agent system (MAS) is a loosely coupled network of software agents that interact to solve problems that are beyond the individual capacities or knowledge of each problem solver. An MAS distributes computational resources and capabilities across a network of interconnected agents.

### **Intelligent Software Agents**

In a general sense, the multiagent system (MAS) is a paradigm in the computer sciences and related areas where a system of interest is conceived as a set of autonomous entities called agents, as well as its interaction mechanisms.
