What is Narrowband IOT? - 5G.co.uk

Narrowband IoT (NB-IoT) is a cellular low-power wide-area (LPWA) connectivity standard that enables IoT devices to send their data directly to the cloud without a gateway in between. By low power, we mean that IoT devices can run on battery for 10+ years. By wide area, we mean that cell coverage is improved so that, for example, smart meters in basements can connect to the network reliably.

NB-IoT - Devopedia

The GSMA counts 82 operator-run NB-IoT networks, as of May 2019. All of these utilise the unused resource blocks within an LTE carrier's guard band, which impacts performance. Guard bands are there for a reason: to stop roll-off of output power from base stations into adjacent LTE channels.
