List Operation | Mendix Documentation

The basic goal of template matching is to find a smaller image or template into a larger image. As we can understand from the above statement, for template matching, we require two images one is a source image holding the template image under it, and the other is a template image which is required to find out from the source image.

Guide To Template Matching With OpenCV: To Find Objects In Images

Built-in Objects. Objects are passed into a template from the template engine. And your code can pass objects around (we'll see examples when we look at the with and range statements). There are even a few ways to create new objects within your templates, like with the tuple function we'll see later.. Objects can be simple, and have just one value.

Helm | Built-in Objects

Operations - preparing for potential operation and supply disruptions, distribution failures, and a loss of assets. Reputation - preparing for a loss of confidence from customers or employees, or market operations being damaged. Procedures - preparing for internal system, accountability, or control failures, or fraud.
